FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

U.S. Farm Exports Hit New High of \$7.8 Billion in 1970/71 (see p. 5). The value of agricultural exports advanced 15 percent from 1969/70 and reached a new record. Commercial sales rose to \$6.8 billion, causing the gain, while Government-financed shipments totaled about the same as the previous year's \$1,023 million. Two-thirds of the increase in total export value was due to a larger volume and one-third to higher prices. Expanded volume was concentrated in soybean products, wheat, cotton, tallow, edible nuts, slaughter cattle, and dairy products. Higher prices for soybean products, wheat, feed grains, cotton, tobacco, and tallow contributed significantly to the rise in export value. Most of the increase in farm commodity sales went to Western Europe, Canada, and Japan. A reduced European grain crop, expanded livestock production, lower cotton production in Brazil and Mexico, and higher demand for both vegetable oils and protein meals made the sharp gain in U.S. exports possible.

* * * * *

U.S. Agricultural Imports Rise 4 Percent in 1970/71 (see p. 20). During the year ended June 30, 1971, U.S. imports of agricultural products totaled \$5.8 billion, compared with \$5.6 billion a year earlier. Higher prices accounted for the advance. The overall volume index remained at 111 percent of the 1967 base. All of the gain for 1970/71 occurred in supplementary commodities, notably dairy products, beef, pork, fruits, nuts, vegetables, grains, oilseeds, vegetable oils, sugar, and wines. Complementary items -- mostly tropical products -- remained about the same as a year earlier. Increases in coffee prices, bananas, black pepper, and tea were offset by declines for cocoa prices, rubber, silk, and carpet wool.

* * * * *

International Price Highlights (see p. 34). During June, feed grain, soybean, and rice prices advanced briskly, but wheat prices were mixed and changed relatively little. The price of Argentine corn rose 8 percent from May to June on a c.i.f. U.K. basis and 9 percent in Argentina.

The EC Commission proposes increases in most target (or equivalent) prices and intervention prices for 1972/73 (see p. 31). Proposals to increase the beef price by 7.3 percent and the corn price by 3.2 percent are of most significance to American feed grain exporters. Most other adjustments would be at lesser rates and are justified by their proponents as responses to inflation and for the maintenance of agricultural parity.

1/ Government-financed programs include exports under Public Law 480 programs (sales for foreign currency, long-term dollar and convertible local currency credit sales, barter for strategic materials, and donations) and under AID programs. 2/ Commercial sales (exports outside Government-financed programs) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies, which benefit the U.S. balance of payments and rely primarily upon authority other than P.L. 480; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind. 3/ Commodity group totals for feed grains, oilseeds and products, and animals and products include for years noted, in addition to the value reported by the Bureau of the Census, the estimated value of certain commodities donated through voluntary relief agencies, which are included by Census in "Other food for relief and charity." 4/ Preliminary data. 5/ Less than \$500,000. 6/ Commodities may not add to total due to rounding.

U.S. FARM EXPORTS HIT NEW HIGH OF \$7.8 BILLION IN 1970/71

by
Dewain H. Rahe 1/

U.S. agricultural exports advanced sharply in 1970/71 to a new record of \$7.8 billion -- 15 percent above 1969/70's \$6.7 billion and 14 percent above the previous \$6.8 billion record of 1966/67. Eleven months of the year set new monthly highs, demonstrating the buoyancy of farm exports. In fact, every month was substantially above the year-earlier level.

Increased volume was responsible for about two-thirds of the overall increase in U.S. agricultural exports in 1970/71. Increased volume was especially notable for soybeans and soybean products, wheat, cotton, inedible tallow, nuts, slaughter cattle, and dairy products shipped under Government-financed programs. Higher prices represented about one-third of the total value gain. Substantial price rises helped to boost the export value of soybeans, soybean products, feed grains, wheat, cotton, tobacco, and inedible tallow. Rice was the only major commodity with an average export unit value lower than a year earlier.

All of the gain in 1970/71 occurred for commercial sales for dollars. These sales totaled about \$6.8 billion, sharply above the \$5.7 billion a year earlier. Exports under Government-financed programs were about equal to the \$1,023 million exported in 1969/70. The commercial-sale total was assisted by substantial gains in exports under the CCC commodity credit sales and barter for offshore procurement. Commodity credit sales totaled \$391 million in 1970/71, sharply above the \$211 million of 1969/70. Barter exports shipped under contract for overseas procurement for U.S. agencies reached \$830 million in 1970/71, up sharply from \$468 million in 1969/70.

The export of \$7.8 billion worth of farm products required the output of 1 out of every 4 acres harvested or 72 million acres of U.S. cropland for the commodities exported in 1970/71. The foreign market took over half of the rice, wheat, and soybean production, nearly two-fifths of the cattle hides, and over one-third of the tallow, tobacco, and cotton produced. Foreign outlets also are important for a number of minor products, including for example one-fifth of the output of dry edible beans, lemons, and nonfat dry milk. Feed grain exports represented about one-fifth of the sales by U.S. farmers.

Developed countries, mainly those in Western Europe, Japan, and Canada, increased their purchases of U.S. agricultural products by about one-fifth in 1970/71. This accounted for approximately three-fourths of the fiscal year's export increase.

1/ Assistant Chief, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

1/ Summation of columns may not equal totals due to rounding.

2/ Preliminary.

3/ Beginning January 1970, export values include small amounts of commodities formerly classified as nonagricultural.

Exports to developing countries also increased, mainly to Korea, Taiwan, and Mexico. Significantly, the expansion to these developing countries was in sales for dollars. Total agricultural exports under Government programs were about the same.

Exports to Eastern Europe and the Soviet Union showed a rather sharp value gain. Shipments were \$41 million above 1969/70's \$129 million, mainly because of larger exports of grains and oilseeds and products.

A number of factors helped boost U.S. agricultural exports to a new record in 1970/71. With a relatively sharp reduction in European Community (EC) grain production and stocks, total grain supply in the EC for 1970/71 was down about 8 million tons. The reduction in grain stocks reflected not only smaller production but also heavy use of subsidies by the EC in 1969/70 to move wheat into domestic feed use and exports. Another important item was continued expansion of livestock production in the principal developed markets. For example, EC livestock production is estimated to be 4 percent larger in 1970 than a year earlier. Japan's livestock production showed about a 3-percent increase in 1970.

The overall growth in our agricultural exports occurred despite some slowdown in the overall industrial and economic activities in major markets. For example, EC industrial production was up about 3 percent in the first half of 1971, compared with 8 percent in first-half 1970. Japan's industrial production advanced about 7 percent in contrast to nearly 20 percent a year earlier.

Oilseeds and products were top performers again, important to the expansion of U.S. agricultural exports in 1970/71. Setting new marks for both volume and value, this category gained slightly over one-fifth to a record \$2.06 billion, on the strength of increased foreign demand for both vegetable oil and protein meal. Soybean shipments reached a new high of 421 million bushels, 16 million bushels more than a year earlier. Meal exports also reached a new record of 4.5 million tons, 15 percent above the year-earlier peak, and soybean oil exports surged more than 600 million pounds to 1.8 billion pounds. Furthermore, higher prices boosted the value of soybean oil exports by 70 percent above the level of a year earlier to \$242 million.

Expanding livestock production, below-trend foreign production of other oils, and near-record U.S. soybean supplies in 1970/71 all contributed to increased U.S. exports. Foreign export availabilities of key edible oils such as peanut, sunflowerseed, and coconut oil have been below trend. High grain prices in the EC have encouraged increased feeding of economically priced U.S. soybean meal. The EC increased its purchases of U.S. soybeans to 155 million bushels in 1970/71 from 140 million in 1969/70. Japan, our largest soybean customer, took 101 million bushels in 1970/71, compared with 95 million bushels in 1969/70. Other important markets for U.S. soybeans in the past fiscal year included Israel, the United Kingdom, Spain, Taiwan, and Denmark.

The surge in U.S. exports of soybeans and products, coupled with slow growth in exports of other oilseeds and products from other exporters boosted the U.S. share of world oilseeds cake and meal trade to over 55 percent in 1970/71 from 44 percent in 1965/66.

Wheat accounted for over three-fourths of a 15-percent gain in exports of grains and preparations in 1970/71. U.S. wheat shipments for the year totaled 739 million bushels, up strongly from 606 million bushels a year earlier. Commercial sales accounted for nearly three-fourths of the total and for all of the gain. About one-fourth of the increased commercial movement consisted of barter transactions and CCC commodity credit sales. In the past year, the EC, Japan, the United Kingdom, Nigeria, Yugoslavia, Romania, Korea, the Republic of China, and Morocco took larger quantities of U.S. wheat, while India, Brazil, and Venezuela took less. Japan was the top commercial market for U.S. wheat exports in 1970/71, practically doubling its takings to 106 million bushels.

Feed grain exports of nearly 19 million metric tons in 1970/71 were about the same as those a year earlier. However, because of substantially higher prices -- especially for corn -- value showed a 11-percent gain. Feed grain exports were hampered by a reduction in U.S. corn production caused by blight and unfavorable weather. In addition, larger supplies were available from other sources, especially Argentina and Australia. The EC purchased approximately 6 million tons in 1970/71, compared with about 4.7 million tons in 1969/70. However, shipments to Japan declined to slightly over 5.8 million tons from 6.4 million tons in 1969/70.

U.S. rice exports fell 11 percent to 34.5 million bags. Commercial sales to the EC and to other developed countries dropped although shipments under Government-financed programs were about the same as the previous year. Considerably more competition from Latin American countries was evident in the European markets. Because of large supplies, a few Latin American countries resorted to large subsidies in moving their rice into foreign markets.

U.S. exports of cotton showed a marked improvement in the latter part of 1970/71. Cotton exports advanced 28 percent to about 3.7 million bales in 1970/71 from 2.9 million bales a year earlier. With higher prices, the value was 42 percent above the year-earlier level. Exports increased substantially because of smaller free world production, especially in Brazil, Mexico, and other developing countries. More U.S. cotton moved to the EC, Canada, Japan, and other Asian countries. However, the full potential of U.S. cotton exports may not have been realized -- cotton availability in 1970/71 was limited by tight U.S. supplies of the types of cotton demanded by foreign mills. The long-term prospects for continued growth in U.S. cotton exports are limited by rapid expansion in the production and use of manmade fibers in most industrial countries.

U.S. tobacco exports showed substantial gains in the latter part of the year. With a value total of \$537 million, unmanufactured tobacco exports were about the same as a year earlier. If bulk smoking tobacco is included in the total, U.S. exports were 583 million pounds, only slightly below the 591 million a year earlier. The value of \$570 million was about 1 percent above a year earlier. The 21-million-pound drop in exports to the United Kingdom, the top country market for U.S. unmanufactured tobacco, partly offset the export gains to West Germany and Japan. The United Kingdom has maintained its stocks of U.S. tobacco at relatively low levels during the current year and also has purchased more tobacco from other areas, mainly India, Mainland China, and Korea.

Inedible tallow exports of \$203 million, up one-third, brought 1970/71 animal and animal product exports to a \$915 million total, for a gain of 13 percent. Exports of dairy products, mainly nonfat dry milk under Government-financed programs, were up 20 percent. Meat and poultry shipments were unchanged, but exports of hides and skins were off nearly a tenth. However, exports of slaughter cattle to Canada increased substantially in the past year because of the limited marketing available in Canada. Canada is increasing its herd and offering only small numbers for slaughter in most of 1970/71. Somewhat reduced pork shipments failed to offset expanded exports of beef. U.S. beef exports have been expanding rapidly, primarily for hotel and tourist use in developed countries, and also in prime tourist areas such as the Caribbean.

Combined exports of fruits and vegetables in 1970/71, at \$542 million, were only slightly above the level of a year earlier. Exports of fruits and preparations were about the same as in 1969/70, though lower U.S. production and larger output in Australia and South Africa discouraged U.S. shipments of fruit cocktail, canned peaches, and other canned fruit. However, exports of fruit juices, primarily citrus, rose sharply because of increased production in Florida and lower U.S. prices. Gains in shipments of dried fruits were about offset by smaller exports of fresh fruits.

Exports of vegetables and preparations valued at \$208 million in 1970/71 were about the same as a year earlier. Shipments of fresh vegetables, hops and specialty products such as dehydrated vegetables and soups gained slightly. However, exports of canned vegetables were down from year-earlier levels.

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

U.S. AGRICULTURAL IMPORTS RISE 4 PERCENT IN 1970/71

The value of U.S. agricultural imports continued to increase in 1970/71, but at a slower rate than the year before. U.S. purchases of foreign farm products during the year ended June 30, 1971, totaled \$5.8 billion, 4 percent above 1969/70. In contrast, 1969/70 imports of agricultural products amounting to \$5.6 billion represented an 11-percent gain over the preceding year. Price increases accounted for all the 1970/71 advance and three-fourths of the 1969/70 rise. The quantity index (1967=100) remained at 111 in fiscal years 1970 and 1971, compared with 107 in fiscal year 1969.

Supplementary agricultural imports moved up 7 percent to \$3.7 billion and accounted for all of the 1970/71 gain. Commodity increases included dairy products, beef and veal, pork, fruits, nuts, vegetables, grains, oilseeds, vegetable oils, sugar, wines, and nursery stock. The volume index for supplementary products rose 2 percent to 118. About two-thirds of the advance in this category was therefore due to higher prices. Higher priced imports in 1970/71 included cattle, cheese, casein, beef, sugar, olives, and canned mushrooms.

Dutiable cattle purchases fell to 964,000 head and \$101 million from 1.2 million head valued at \$110 million in 1969/70. Reduced entries from Mexico and Canada accounted for the decline. The declining trend in imports of hides and wool continued into 1970/71. Cheese imports gained less than 2 percent in volume, while value advanced 10 percent. Quota controls were established in January 1971 for certain cheeses containing 0.5 percent or less butterfat by weight. Following an investigation by the U.S. Tariff Commission, which found that imports of skim milk manufacturing cheese interfered with the price support program under Section 22 of the Agricultural Adjustment Act, a Presidential Proclamation was issued limiting such imports to 8.9 million pounds during calendar year 1970.

Skim milk manufacturing cheese imports were previously included in the tariff description, "cheese, not elsewhere specified, valued over 25 cents per pound." In 1969/70, such imports totaled 34 million pounds, valued at \$16 million.

Several types of imported cheeses showed volume declines in 1970/71 compared with the previous fiscal year: Cheddar, colby, reggiano, roquefort, and romano. These were more than offset by increases for emmenthaler, provolone, percorino, and sheepsmilk cheese for grating.

Sugar imports continued their long-term uptrend in 1970/71 by rising 6 percent to 5.3 million short tons. In the same period, value increased 9 percent to \$749 million; import unit value averaged \$140.80 per ton compared with \$136.55 last year.

Still table wine imports into the United States accounted for most of the gain in over-all wine purchases during 1970/71. Entries of table wines grew more than a fifth from a year earlier to 23 million gallons and \$99 million. While France, Italy, and West Germany boosted their wine exports to the United States, Portuguese and Spanish shipments took a larger share of the market.

During the past fiscal year, U.S. imports of complementary agricultural items -- mostly tropical products -- remained near their 1969/70 level. Sharp price increases for coffee, plus larger purchases of bananas, tea, and pepper offset declines for cocoa prices, rubber, silk, and carpet wools.

Quarterly imports of agricultural products reached a record high \$1.54 billion in April-June 1971. Average monthly imports in the quarter also were the highest on record at \$541 million, with June amounting to \$530 million.

Increased U.S. demand for imports this year is partly due to some improvement in the gross national product, disposable income, and consumer spending. Some anticipatory purchases by importers were probably made before labor contracts expired. Longshoremen at West Coast ports struck on July 1; contracts for those at East Coast and Gulf ports will expire at the end of September.

Most of the additional U.S. agricultural imports in 1970/71 came from Canada, Europe, Asia, and Africa. Those from Canada rose 16 percent to \$319 million. The European Community exported \$439 million or 11 percent more to the United States than in 1969/70. European Free Trade Association exports of farm products to the United States gained a fourth to \$306 million, with Denmark, the United Kingdom, Switzerland, and Portugal the main suppliers. European Community Associates Greece and Turkey, along with Spain and Yugoslavia, also shared in the larger U.S. import market. Strong agricultural export growth from the Philippines and India raised U.S. imports from Asia. The major agricultural exporting countries in Africa generally increased their shipments to the United States. Exceptions were South Africa, Ethiopia, and Congo Kinshasa.

1/ New series beginning July 1969: includes furskins, bulk tobacco, and candy.
 2/ Preliminary.

Table 10.--Unit values for principal U.S. agricultural imports, 1968/69 to 1970/71

Commodity or commodity group	Unit	1968/69	1969/70	1970/71 <u>1/</u>
-- <u>Dollars</u> --				
Cattle, dutiable, 200-700 lbs.	No.	85.28	82.48	90.58
Beef, boneless; fresh or frozen ..	Lb.	.43	.49	.51
Pork, fresh or frozen	Lb.	.47	.49	.38
Pork, canned hams and shoulders ..	Lb.	.79	.86	.86
Cheese, Emmenthaler or Swiss	Lb.	.40	.54	.57
Casein	Lb.	.21	.21	.24
Sheep and lamb skins	Lb.	.72	.69	.73
Wool, apparel	Glb.	.60	.57	.48
Cotton, raw	Rbale	163.75	150.78	171.62
Oranges, canned mandarin	Lb.	.19	.19	.22
Pineapples, canned	Lb.	.11	.12	.12
Strawberries, frozen	Lb.	.17	.15	.13
Biscuits, cakes, wafers	Lb.	.36	.36	.37
Cashew nuts, shelled	Lb.	.57	.56	.60
Coconut meat, shredded	Lb.	.17	.13	.13
Coconut oil, crude	Lb.	.13	.13	.13
Copra	Lb.	.08	.08	.09
Sugar, cane	Ston	131.64	136.55	140.80
Molasses, inedible	Gal.	.11	.11	.11
Cucumbers, fresh	Lb.	.10	.09	.09
Hops	Lb.	.93	.98	.98
Mushrooms, canned	Lb.	.56	.57	.65
Olives, in brine	Lb.	2.53	2.30	2.48
Peppers, fresh	Lb.	.18	.18	.20
Tomatoes, fresh	Lb.	.15	.15	.15
Tomato paste and sauce	Lb.	.14	.14	.14
Tobacco, cigarette leaf	Lb.	.68	.68	.66
Beer and ale	Gal.	1.09	1.13	1.18
Wine, still grape	Gal.	4.20	4.36	4.28
Bananas, fresh	Lb.	.05	.05	.05
Coffee, green	Lb.	.34	.38	.44
Coffee, soluble	Lb.	.96	1.14	1.47
Cocoa beans	Lb.	.30	.36	.28
Cocoa butter	Lb.	.71	.78	.57
Cocoa, prepared	Lb.	.12	.16	.17
Lime oil	Lb.	7.53	7.47	6.71
Sisal and henequin	Lton	113.65	117.89	108.29
Rubber, crude, dry	Lb.	.18	.21	.16
Rubber milk, latex	Lb.	.20	.19	.18
Silk, raw	Lb.	7.71	7.24	7.63
Pepper, unground black	Lb.	.26	.37	.45
Vanilla beans	Lb.	4.69	4.80	4.51
Tea, crude	Lb.	.39	.37	.39
Wool, carpet	Glb.	.35	.36	.35

International Price Highlights

EUROPEAN COMMUNITY PROPOSES PRICE INCREASES FOR 1972/73

The ink had hardly dried on European Community (EC) regulations increasing agricultural prices in 1971 (see April 1971 FATUS, p. 23 ff.), when the EC Commission submitted proposals to the Council for further price increases in 1972 (see table 13).

The 1971 prices, although legally valid for 1 year only, were expected to continue for a longer term, except for beef. The price announcement for 1971 mentioned a second increase in the orientation price for beef to take effect in 1972. Under the new proposals for 1972, that price is to rise from \$720 to \$772.50 a metric ton, rather than to the \$750 a metric ton decreed in March. The proposed increase of 7.3 percent is intended to outdistance a 2-percent increase in the 1972 milk price to create an additional incentive for beef production (see table 14). Most other proposed increases are 3.6 percent or less. The 3.6-percent increase is proposed for the base price of pork, which would be effective in November 1971.

In April, we observed that a misalignment would result from raising the barley price from \$95.44 to \$100.21 a metric ton, while raising the corn price only to \$96.89. In 1970/71, the beginning target price of corn was \$95.94, just slightly above that of barley. The 1972 proposals would raise the corn price to \$100 and the prices of barley and rye to \$103. This would still leave a misalignment between corn and barley prices, but slightly less so than this year.

The target price for nondurum wheat would go up by 2.3 percent, or \$2.56 a ton, in contrast to somewhat larger percentage and dollar increases for corn and barley, reducing the relative and absolute differences between wheat and feed grain prices. Barley and rye target prices would be 92 percent of the target price for nondurum wheat; the corn target price would be 89 percent of the nondurum wheat price. These percentages are now slightly lower. In the United States, the season average price (including price support payments) received by farmers per ton of corn was 77 percent of that of wheat in 1969 and 84 percent in 1970 (an abnormal year because of the short corn crop).

In addition to price increases proposed for the EC as a whole, the \$7.50-a-ton discount in the levy on feed grains imported into Italy by sea will expire in July 1972. Feed grain prices in Italy then will increase by that amount. Because ocean freight rates from the Western Hemisphere to Italian ports are higher than to Rotterdam and port costs in Italian ports are also higher than in Rotterdam, corn prices in Italy will tend to exceed the EC threshold price beginning in August 1972. ^{1/} This will primarily affect the Italian livestock, poultry, and egg sectors. An additional effect will be a change in the rice-corn price relationship in Italy for the 1972 crop in favor of corn. Since the unified Common Agricultural Policy for rice took effect 4 years ago, the price relationship was extremely favorable to rice. Indeed, rice acreage increased by one-third from 326,000 acres (132,000 hectares) in 1966 to 435,000 acres (176,000 hectares)

^{1/} For a more detailed analysis of this prospect, see Hirsch, Hans G. and Ann Miller Watkins, Grain Price Formation and Grain Price Reporting in Italy, FAER-61, U.S. Department of Agriculture, July 1970, pp. 80 ff.

Table 13.--EC Commission common agricultural policy price proposals for beginning of 1972 season, compared with beginning of 1971 1/

Commodity	Target price		Intervention price	
	1971	1972	1971	1972
-- Dollars per metric ton --				
Nondurum wheat	109.44	112.00	100.72	103.00

Sugar, white <u>8/</u>	238.00	239.60	226.10	227.60
Rapeseed and sunflowerseed	202.50	202.50	196.50	196.50
Olive oil:				
Producers	1,152.50	1,187.50	NA	NA
Market	721.00	783.00	648.50	710.50

1/ These beginning season prices are subject to monthly increases for part of the year. The beginning of the season is November of the preceding year for pork and olive oil, April for milk and products and for beef and veal, July for sugar and oilseeds, August for wheat and feed grains, and September for rice.

2/ Growers are guaranteed a minimum price of \$147.90 in 1971/72. The proposed minimum price for 1972/73 is \$151.00, a 2.1-percent increase.

3/ Applies to brown (husked) rice; the 1971 price was erroneously shown as \$190.93 in the April 1971 issue of this journal.

4/ Applies to rough rice (paddy); this price was erroneously shown as applicable to brown rice in the April 1971 issue of this journal.

5/ A subsidy of \$130.00 (\$16.50 on fluid basis) is paid for feed use in 1971 and proposed to be continued at the same rate.

6/ Orientation price.

7/ Base prices.

8/ Minimum beet prices, \$17.00 in 1971, \$17.20 proposed for 1972, a 1.2-percent increase.

Source: See table 13.

in 1971. However, the EC Commission proposals also provide for a 2-percent increase in the target price for rice.

Of the other prices and price increases shown in tables 13 and 14, three deserve analysis: (1) Within the dairy sector, the emphasis away from butter and toward nonfat milk solids would be continued. The intervention price for butter would not be increased, while the price of dried skim milk would go up 5.1 percent. (2) Rapeseed and sunflowerseed prices would remain unchanged. (3) As a further concession to the Italian olive industry, the intervention price for olive oil would go up 9.6 percent, the market target price would go up 8.6 percent, and the producer target price 3.0 percent. Since the difference between the higher producer and the lower market target price is paid to producers as a subsidy, the narrowing of that difference would tend to reduce the disbursements of the European Agricultural Guidance and Guarantee Fund. This reduction, however, could be offset by reduced consumption and increased intervention transactions inherent in higher market target and intervention prices.

With the exception of skim milk and olive oil, the proposed increases in intervention prices amount to less than 3 percent. In the case of barley, at least, there seems to be an intent to avoid further encouragement of sales to intervention agencies. No proposals for corn and rice intervention prices were published. The present uniform intervention price for corn, \$79.31 a ton, is applicable without regional variation. It has been set at what would be the lowest derived intervention price, applicable in the principal surplus region, if there were regional variation. This encourages sales to commercial outlets or feeding on the farm where the corn is grown, and discourages sales to intervention agencies.

The Commission proposed price increases because of ongoing inflation and the floating of German currency. The fact that the rate of inflation in the EC is currently higher than the 2-3 percent rate for most proposed price increases is adduced to justify the proposals. In Germany, moreover, the floating of the exchange rate creates a special, somewhat paradoxical problem. The floating exchange rate for the mark has meant a higher value of the mark relative to other currencies (i.e. the opposite of inflation). Because of this, agricultural prices set by the EC in "units of account" (i.e., dollars) have tended to reduce the prices which German farmers receive in their national currency. The exchange rate of the floating mark has been around 3.50 marks per unit of account, compared with the former fixed rate of 3.66 marks per unit of account. This has tended to reduce German farm prices by 4.5 percent. Thus, the people in the EC justify price increases for opposite reasons, inflation and deflation.

Although EC regulations envisage the setting of target, threshold, and intervention prices a year before they are to take effect to enable farmers to plan fall crops, the EC Council is not expected to act on the Commission proposals for some months.

If the Council reacts to the new proposals as it has to earlier submissions, the Commission proposals will not be rubber-stamped. For example, grain prices set by the Council for 1971/72 were nearly all higher than those proposed by the Commission.

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

During June, feed grain, soybean, and rice prices advanced briskly; but wheat prices were mixed and changed relatively little (table 15).

Argentine corn, c.i.f. U.K., posted the largest gain, increasing 8 percent to \$74.60 a metric ton. At this level, it was 3 percent higher than a year earlier. Although the official Argentine corn production estimate was raised from 9.8 to 9.9 million metric tons early in June, the harvest on 30 percent of the acreage remained to be completed at that late time. Also, during the first 3 months of the corn marketing year, April-June, only 1.85 million tons were exported compared with 2.06 million tons a year earlier. Thus export prospects for the balance of the year, July-March, are 4.15 million tons compared with 3.41 million tons actually exported during those 9 months last year. The increase in the price of Argentine corn on a c.i.f. U.K. basis was reflected in a similar 9-percent rise in the price of such corn, basis Rosario (on the Rio de la Plata) for August delivery, from \$42.84 a metric ton in mid-May to \$46.67 in mid-June. That increase was attributed in Argentina to reports of possible injury to the U.S. crop from southern corn leaf blight and from the drought in the southwestern States.

In the United States, the price of No. 2 yellow corn, f.o.b. vessel at Gulf ports, rose 5 percent during June and amounted to \$65.75 a metric ton, while No. 3 yellow corn, c.i.f. U.K., was quoted at \$73.30, up 4 percent from May.

As of mid-July, the National Federal-State Information Center for Corn Blight had reported instances of blight infection in 29 States. However, the actual impact of the disease on crop production cannot be ascertained until later in the season.

Despite the high cost of fungicide application, farmers in some States are attempting to prevent the spread of corn blight infection. The July Crop Report indicated that 64.5 million acres of corn had been planted to be harvested for grain. This was 11.2 percent more than reported a year ago, and 12.4 percent more than actually harvested. Also, more than half of total acreage was planted this year to blight-tolerant normal cytoplasm hybrid seed or blends of such seed with susceptible seed, according to seed corn suppliers' reports during the planting season. Thus there are several factors which favor a good corn crop.

The steeper rise in the price of Argentine corn restored the customary premium over U.S. corn on a c.i.f. U.K. basis. The magnitude of the premium was \$1.30 a ton. Sorghum grain, c.i.f. U.K., was selling at \$65.30 a ton, a 6-percent increase over May. The price differential between U.S. corn and sorghum grain declined from \$8.77 to \$8.00 a ton.

Wheat of Canadian origin increased in price during June. Canadian No. 1 Northern wheat, in store Fort William-Port Arthur, increased 1 percent to \$64.33 a metric ton, 4 percent higher than a year ago. Northern Manitoba No. 2 wheat, c.i.f. U.K., increased slightly to \$77.29, but at that level was 2 percent below a year earlier.

Wheat of American origin, on the other hand, could be bought for less in June than in May. The buyer's price of U.S. No. 1 Hard Winter wheat, ordinary protein, f.o.b. Gulf ports, declined 2 percent to \$61.82, a level that was 18 percent higher than a year earlier. But the seller's price for that wheat was unchanged from May at \$64.67 a metric ton, 18 percent higher than a year earlier. Thus, the export payment rate was about doubled, from \$1.38 metric ton, (4 cents a bushel) in May to \$2.85 (8 cents a bushel) in June.

U.S. No. 2 Hard Winter wheat, c.i.f. U.K., was quoted at \$75.11 a metric ton, a slight decline from a month earlier, but a 1-percent increase from a year earlier. Australian wheat, c.i.f. U.K., was unchanged from May at \$69.09, but was 6 percent higher than a year earlier. As has been the case since last August, Argentine wheat was not quoted in the United Kingdom. The Argentine government published its final estimate for wheat production from the December 1970-January 1971 harvest: 4.25 million tons, a 39-percent decline from 1969/70 production. Estimated exports for the December 1970-November 1971 marketing year are 700,000 tons compared with 2.28 million tons last year. To restore the attractiveness of wheat production, the Argentine government raised its support price for different types of wheat during the planting season, in early May. These increases amounted to 36-38 percent compared with a year earlier in pesos and to 9 percent in U.S. dollars (the difference is due to devaluation of the peso). The peso increases in wheat support prices were at a rate about twice to 3 times the rates at which the support prices for other grains were increased.

The export price of Thai rice rose for the second month, posting a 3-percent gain to \$127.20 a metric ton. However, this price was 10 percent below a year earlier and also below the relatively stable average price level that prevailed from early 1970 to early 1971.

U.S. No. 2 soybeans, c.i.f. U.K., were quoted at \$130.54 a ton, 1 percent below this season's record price last November. The June price was 4 percent above the May price and 7 percent higher than a year ago. Soybean acreage for beans is estimated to be a record 42.8 million acres. Based on average yield data, soybean production was projected to be 4 percent higher than last year in July.

The price of cotton, Memphis Territory, strict middling 1-1/16 inches, was virtually unchanged from last month at 33.48 cents per pound, but at that level was 12 percent higher than a year earlier.

1/ Based on 359 classifications in 1971. 2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers. 2/ Based on 430 classifications in 1971. 3/ The seasonal adjustment series has been revised to incorporate the Bureau of Census Method X-11. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the adjustment procedures, see U.S. Department of Commerce, Bureau of Census, The X-11 variant of the seasonal Method II seasonal adjustments program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

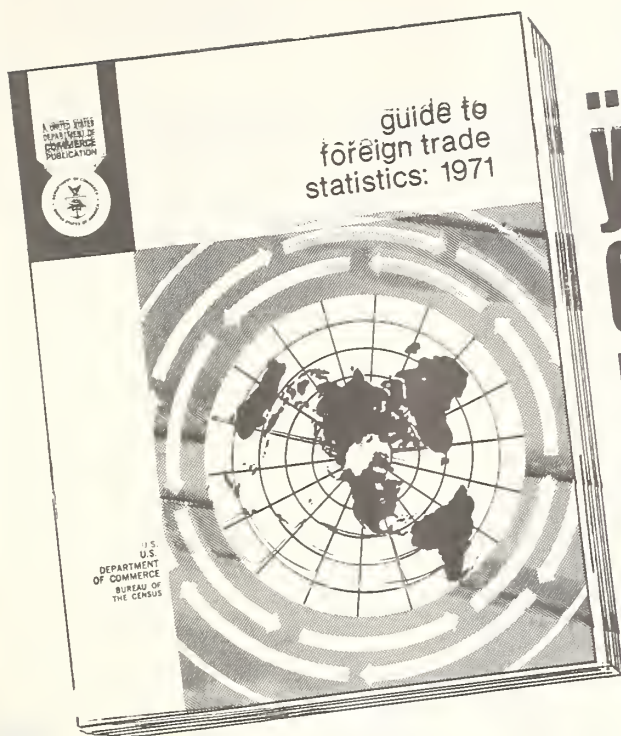

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.

Use the "Guide to FOREIGN TRADE STATISTICS-1971"

The "Guide to Foreign Trade Statistics-1971" is the fastest way to find the facts **you need** concerning foreign trade. The **foreign trade** statistics program, conducted by the Bureau of the Census, involves the **compilation** and dissemination of thousands of facts relating to the imports and exports of the United States. These statistics are designed to serve the needs of both Government and non-Government users who have wide ranges of interests and hundreds of

different reasons to require varied types of foreign trade data. The "Guide," therefore, includes the listings of data presented in many different arrangements and released in the form of reports available by subscription and in reports and machine tabulations, magnetic tapes, and punch cards offered for public reference use. Up-to-date reports and special tabulations listed show current plans for the release of foreign trade statistical data through 1971.
